Dual credit enrollment and FTEs, as well as the percentage of college enrollment, have increased over the past five to seven years due to MECC and VCCS policies involving high school students, as well as increased course offerings. However, the headcount dropped for two years, then rebounded through 2012-13 and 2013-14.

Since the 2004-05 year, the first year all high school students were considered dual enrollment students, a shift developed from the dominance of Arts & Sciences offerings toward Business Technology offerings from earlier years. Arts & Sciences fell 10+% while Business Technology increased around 10% from the 2004-05 year. The remaining four divisions have ranged from 6% to 11% combined in the five-year period. Considering only the last five years, the percentage of credits has stabilized in each division.

Most dual credit students come from Wise and Scott County high schools. As the number of dual enrollment students increases, the percentages have stabilized and have regressed toward the mean percentages of total students from the service region jurisdictions. Enrollment from JI Burton HS rose from earlier years, while Lee County enrollments have been falling.
